Re: Air Max Units

To Whom It May Concern:

I am the commercial property manager for a 140,000 sqft industrial space in Nashua, NH. We had actively been looking for a way to decrease our gas expenses at the property as the heating source for the building is a gas fired boiler. We purchased our Air Max units at the end of 2009 and have been very pleased with the units. During this time, I have found Air Max to provide high quality units at reasonable prices. They met their deadlines and were forthcoming with adjustments and corrections as necessary as well as extremely responsive to my "special" requests. In our high bay space, the Air Max units have helped us bring the hot air back down to the actual work area and we were able to save over \$43,000.00 in natural gas expenses from the previous year.

In addition, the owner of Air Max, Jack Balon, is a pleasure to deal with. I have always found Jack to be available to answer questions. Jack has gone the "extra mile" for me on many occasions.

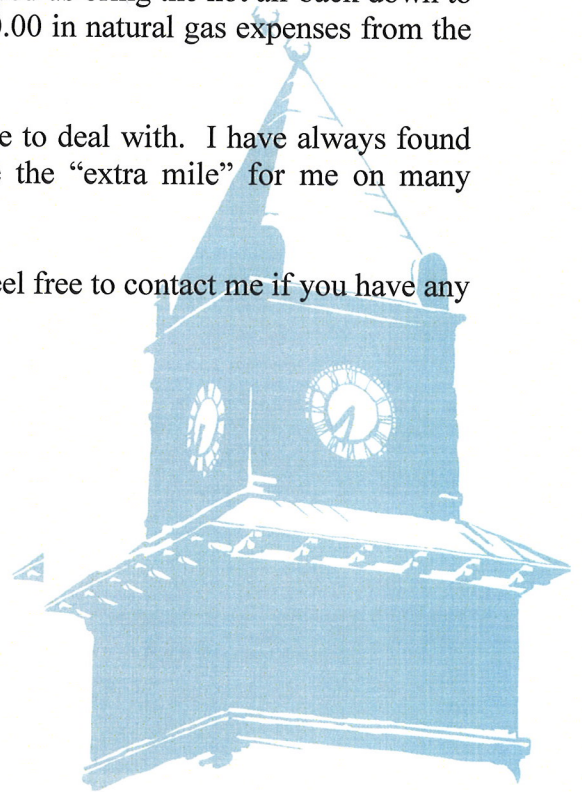

In short, it is my pleasure to recommend Air Max to you. Feel free to contact me if you have any further questions about Air Max.

Sincerely,
